**TURBIL
GROUP**

Turbil Group

Business holding with national and international presence, born from the growth of a family company with over 60 years of experience.

+42 countries

+220 employees

+24K m² facilities

+140K references

+12M sold units

We offer customized products and solutions that combine innovation, design, and sustainability, adapting to each client's specific needs.

Driven by responsible practices, we apply sustainable strategies across all our operations, ensuring quality and reliability in accordance with the highest standards.

Turbil Group Companies

Xaguerri TURBIL GROUP

Leading provider of end-to-end solutions for aluminium profile transformation.

selopin TURBIL GROUP

Experts in fine metal fabrication: laser cutting, folding, punching, welding, and painting.

eme once TURBIL GROUP

Engineering solutions for collective protection systems.

copi TURBIL GROUP

Robotic production of concrete counterweights for industrial and furniture applications.

End-to-end aluminium profile transformation, fully adapted to our clients requirements.

We have extensive experience, specialization, and technological capabilities in aluminium transformation, which allows us to offer top-quality products and to propose and incorporate improvements in the manufacturing of external products.

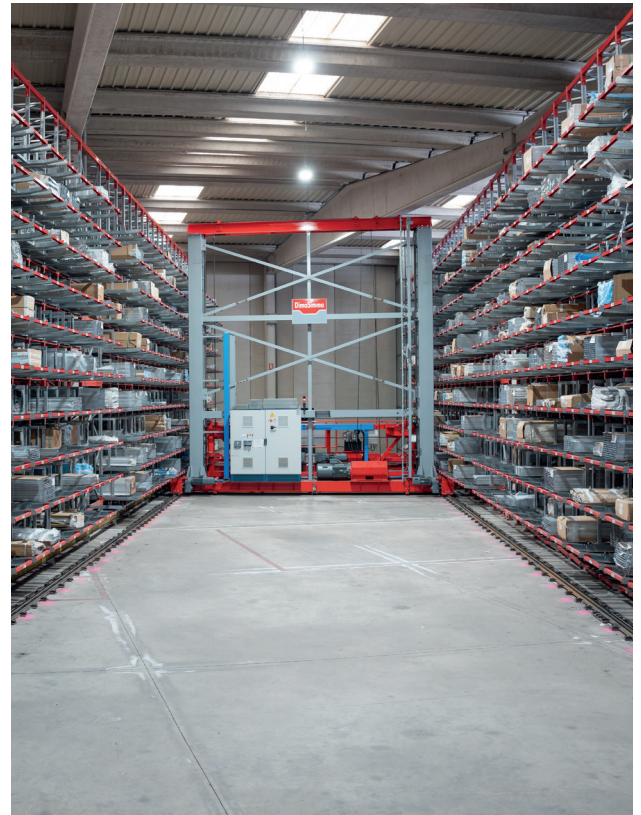

With over 60 years of experience, we lead projects that shift steel-based products toward aluminium solutions, developing new products and performing performance tests such as load analyses and stress studies to meet each client's specific requirements.

Our automated warehouse system enables the direct feeding of cutting and machining machines, as well as efficient stock management of raw materials and processed products.

We operate 12 CNC machines for cutting and machining aluminium profiles, along with 3 collaborative robots and proprietary machinery for profile processing and ladder assembly.

As part of our integration subprocesses, we have presses and dies with capacities of up to 150 tons, allowing us to take on highly specialized tasks.

Additionally, we have a dedicated area for subassembly operations, with over 20 workstations focused on these tasks.

Norma de fabricación EN 131

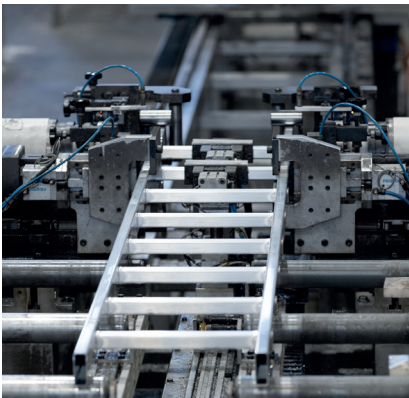

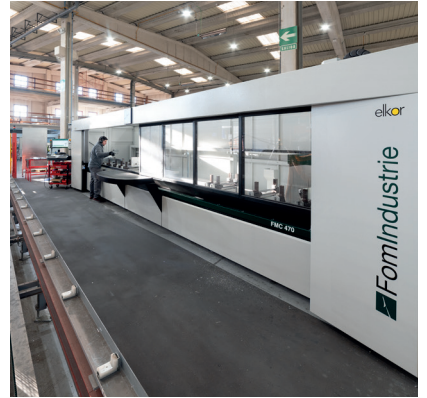

Norma de fabricación ISO EN 14122

Norma de fabricación EN 50308

Norma de fabricación EN 795

Experts in fine metal fabrication: laser cutting, folding, punching, welding, and painting.

At Selopin, we offer a wide range of services, including final powder coating and assembly of components.

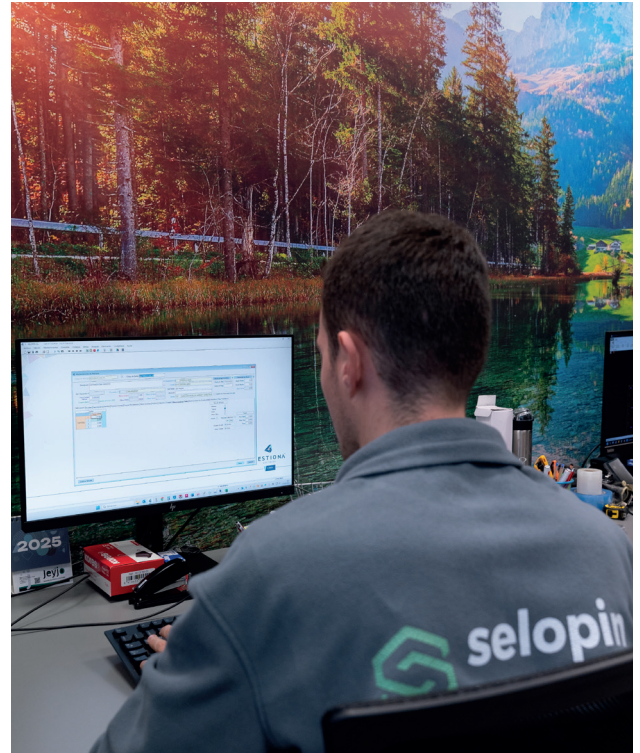

We provide solutions for the industrial, vending, agricultural, furniture, and commercial sectors, among others.

We currently operate with 2 laser cutting machines (up to 32 mm thickness), 1 punching machine, 5 press brakes with automatic tool changers, over 20 certified welders, and a full powder coating line.

From our workshop in Funes, we have the capacity to ship products directly from Spain to anywhere in the world, currently serving more than 15 countries.

Selopin began its journey with just 6 employees and has grown to a team of 85 in less than 4 years.

We are firmly committed to values such as reduced lead times, transparency, and responsibility.

- Laser cutting
- Folding
- Punching

- Welding
- Painting

Engineering of collective protection systems.

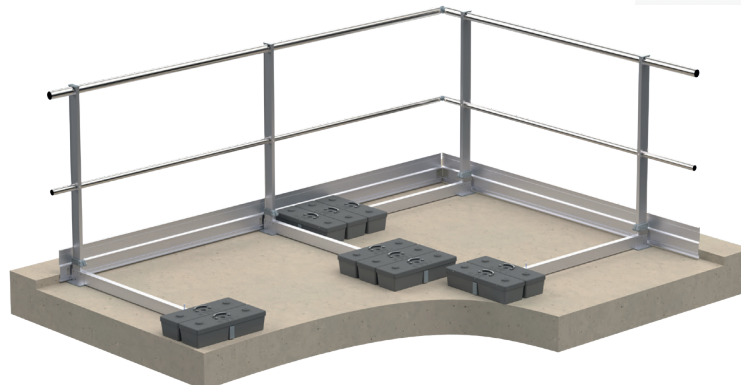

Innovative Solutions

We integrate complete manufacturing processes for both metal and plastic transformation.

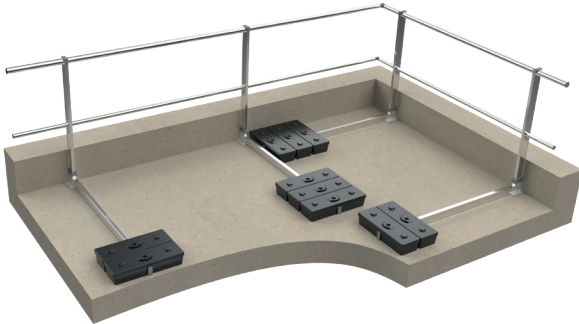

All EmeOnce systems are optimized with a reduced number of components.

The elements in the EmeOnce product range are easy to assemble, and their lightweight design simplifies logistics.

Manufacturing of concrete counterweights.

Company specialized in the manufacturing and distribution of counterweights, offering customized solutions for various industrial sectors.

With solid experience in the industry and a strong commitment to quality, we design and produce high-precision counterweights that ensure efficiency and safety in use.

We focus on innovation and personalized service, adapting to the specific needs of each client.

At Copi, we manufacture counterweights through a comprehensive process that includes volumetric mold design and modeling, a flexible production line, controlled and recorded mix preparation, automated filling, unit weight control, quality sealing, robotic palletizing and packaging, guaranteeing the precision and quality of every piece.

We produce over 60,000 counterweights per month with an efficient team of 12 employees working across three shifts, ensuring delivery within just 72 hours.
